2709 HORSESHOE DRIVE  
LAS VEGAS NV 89120

## UPCOMING EVENTS & SALES

Oct 15-Dec 31  
**FALL & WINTER  
SALE**

**15% OFF**

total Purchase of  
d-Lenolate (any size)  
and Indium Energy

**25% off**

Total Purchase of our Hair  
and skin care products

**50% off**

Zitbars

Discount Code:  
WS07

THIS OFFER IS NOT VALID WITH  
ANY OTHER SPECIAL OFFERS

COME SEE US AT THE  
ANTI-AGING  
CONVENTION  
-Las Vegas, Nevada  
December 12-15, 2007

LISTEN TO THE  
Daniele Lin Show  
(featuring Fluban &  
Indium Energy)

## Hear the Facts

In our last newsletter we mentioned about our continuing effort to document the strength and effectiveness of d-lenolate aka olive leaf extract. Year after year several significant studies have been made and published documenting the powerful correlation of d-Lenolate, to a myriad of life threatening viral, bacterial and fungal diseases. These past and present studies which included HIV, Influenza virus, Candida, Leukemia etc. substantiates hundreds of testimonials received from users of our product, d-lenolate. As our valued customers we want to share this with you for your information.

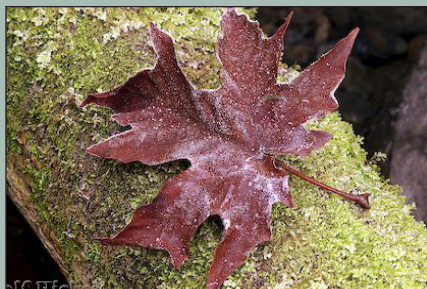

Two "animal" studies, performed by a very prominent Japanese research organization focused on the effects of d-Lenolate on the body's immune system. It resulted in definitive findings indicating highly positive results using d-Lenolate against Influenza, E-Coli, Candida and Strep within immune compromised animals.

## EPR NEWS

We also want to take this opportunity to acknowledge that we have a dedicated and effective network of distributors and resellers, who have been with us over the years, and have mutually benefited from East Park's excellent product line. In our efforts to maintain the most potent and high quality product, the increased cost of raw materials, manufacturing and packaging resulted in our operating costs to rise quite

PRICE INCREASES!**

dramatically. East Park Research, Inc. will absorb these increased cost until the end of this year, however, we will pass along a small portion of these cost in the beginning of the year 2008. We will give you more information as we approach the New Year. Now is a good time to replenish your inventory!. It is our intention to be fair and equitable to our distribution network, while maintaining a profitability level to grow. We hope you continue your relationship with us as there are several exciting new products on the horizon, and together we can do great things.

*d-Lenolate was evaluated for its effectiveness against infection by influenza virus in tissue culture and mice. It demonstrates that early protection against influenza virus infection is related to the number and function of PMN in the blood and, to a lesser extent, macrophages in the lung. d-lenolate prevented the extreme loss of PMN found when mice were treated with CY, lowered the number of viruses found in infected lungs and assisted the PMN in destroying viruses. It further helped restore PMN number in mice previously treated with CY.*

*✦ d-Lenolate appears to be a successful treatment for influenza and extracellular bacterial infection. It is particularly useful as preventative treatment prior to exposure and as a treatment to enhance healing in exposed and immunocompromised mice.*

*✦ d-Lenolate enhanced the restoration of white blood cells to the normal level and protected against infection with bacterial and yeast. Protection in early stage infection has been primarily attributed to PMN production and phagocytic activity.*

*✦ d-Lenolate restored PMN levels in immunocompromised mice and also enhance clearance of E.coli from blood, both restorative effects after infection with bacteria. These two factors makes dLenolate a powerful protectant from infection as well as an enhancer to recovery post infection.*

In 2006, EPR coordinated an initial study with George Mason University, National Center for Bio-Defense in Virginia. The study was performed by Dr. Sergui Popov, a globally acknowledged expert on the study of anthrax. The overall objective of this study was to further test the properties of d-Lenolate with regard to its possible use in prevention, control and clinical therapy of diseases caused by biological agents such as anthrax. Due to the positive results of this study, EPR has developed a protocol with the University of Nevada's Microbiology Department and George Mason University to continue studies on the effectiveness of d-lenolate on the immune system, and directly on selected disease bearing organisms. The future result of this test is concurrent to the continuing advanced studies at George Mason University's bio terrorism department.

Two other in vitro tests were performed in 2007 by a group of prominent biochemists associated with some of the pre-eminent research institutions in the world, including NYU School of Medicine, Massachusetts General Hospital and the Harvard Medical School. These tests were focused on the use of Oleuropein (the core ingredient in d-lenolate) as an inhibitor of HIV virus. One of these tests was executed under a grant by the national Institute of Health. Both

of these studies concluded that Oleuropein is an effective inhibitor of HIV virus and that under certain conditions there was complete inhibition.

Please be sure to read these reports. You will find a mounting body of evidence that supports that d-lenolate is a remarkable preventive of most difficult diseases that most Allopathic doctors are trying to control with drugs.

## **ASK** *eastpark*

**Q. I'm very interested in trying your d-lenolate supplement if it can relieve the following ailments *Candida and Sarcoidosis, Hep C, Hypertension, Diverticula disease and glaucoma?***

A. The immune system is your coat of armor protecting you from many diseases and infections. Therefore, if the immune system is working properly you will not suffer from hundreds of diseases, such as the ailments you were inquiring. However, if your immune system is not functioning at its peak of efficacy, disease flourishes.

Once the immune system is over-burdened with some type of pathogen (virus, fungus, yeast, bacteria, parasites), disease takes a foothold, and sometimes it takes months or even years to manifest itself. In the meantime, the pathogens are in your body draining you of strength and energy.

East Park d-LENOLATE® does not cure any disease. It is a killer of most pathogens. Once the burden of pathogens has been removed, the immune system brings the body chemistry back into balance and relieves you from these ailments.

**Q. What is the difference between d-Lenolate and other olive leaf extract in the market?**

A. First and foremost d-lenolate works! The patented extraction process allows us to preserve more active components within the olive leaf extract. East Park Research completed two clinical studies, Candida (fungi) and Arthritis (virus). Results prove that d-Lenolate has anti-microbial and anti-bacterial activities. Furthermore, third party studies also showed the effects of d-lenolate on the body's immune system, and how an enhanced immune system eradicates some of the world's most deadly viruses and bacteria. Clinical evidences from distinguished international scientists has surfaced that substantiated earlier studies and research as well as anecdotal documentations from using our product.
